NAM total gate count: Quarl Table 2 with our RL-ZX results appended

Lower is better. Bold = row minimum across reported optimizers. Blue = our consistent26circuit cohort.

Paper: https://arxiv.org/html/2307.10120v1#S6.T2 | RM = rotation merging; '-' = unreported.
Our column: source f5874e4, seed11, each circuit stops after3hours without a new total-gate record.
Includes our extraction/postprocessing; not the latest anchor-first scheme. Later barenco36gate results are excluded.
Published baseline runs and our runs differ in compute/training budget. Gate-count reductions do not isolate RL utility.
Our geometric mean reduction: 30.78% over26circuits. Nam's published geometric mean excludes2missing rows.
